for biological basin

SOLUSTEP[®]
Water Treatment Solutions

Solustep B6370

Development support and carbon supply for biological basin

Mode of action

SOLUSTEP B6370 is a concentrated product, composed of natural colloidal substances of plant origin, specially designed to favour and accelerate the development but also for the easily assimilated carbon intake via biochemical route.

SOLUSTEP B6370 provides for better operation of treatment plants and allows for improved output. It allows installations, even undersized ones, to continue operating normally.

SOLUSTEP B6370 buffers the load surges that plants receive and which compromise proper operation. For installations operating satisfactorily, its use guarantees substantial energy savings and increased purifying output.

Presentation

Appearance: liquid

Stability: 60°C maximum

pH: 2.4 (± 0.5)

Application

The dosage of **SOLUSTEP B6370** is to be adapted to each type of installation and must be determined according to the problems to be solved and the results that are sought. Our technical departments should therefore be consulted before using the product.

Packaging

SOLUSTEP B6370 is packaged in 1000 L containers or in bulk 24 T.

Handling

SOLUSTEP B6370 is not toxic to humans, animals or plants.
